# Weekly Coal Production

Production for Week Ended:  
July 4, 1987

# Highlights

U.S. coal production in the week ended July 4, 1987, as estimated by the Energy Information Administration, totaled 12.7 million short tons (bituminous coal and lignite, 12.7 million short tons; Pennsylvania anthracite, .06 million short tons). This was 30.0 percent lower than in the previous week, (due to the miners' scheduled vacation period) and was 7.4 percent higher than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through July 4, 1987, was estimated at 445.1 million short tons, 3.4 percent below the 460.6 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
